PCT MDA/BA

NOTIFICATION OF TRANSMITTAL OF  
THE INTERNATIONAL PRELIMINARY  
REPORT ON PATENTABILITY  
(PCT Rule 71.1)

Date of mailing  
(day/month/year)

11.11.2005

Applicant's or agent's file reference  
35273PC01

## IMPORTANT NOTIFICATION

International application No.  
PCT/DK2004/000487

International filing date (day/month/year)  
07.07.2004

Priority date (day/month/year)  
07.07.2003

Applicant  
KMC KARTOFFELMELCENTRALEN AMBA et al.

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary report on patentability and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

**INTERNATIONAL PRELIMINARY REPORT  
ON PATENTABILITY**

International application No.  
PCT/DK2004/000487

---

**Box No. I Basis of the report**

---

1. With regard to the **language**, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.
- ☐ This report is based on translations from the original language into the following language , which is the language of a translation furnished for the purposes of:
- ☐ international search (under Rules 12.3 and 23.1(b))
  - ☐ publication of the international application (under Rule 12.4)
  - ☐ international preliminary examination (under Rules 55.2 and/or 55.3)
2. With regard to the **elements\*** of the international application, this report is based on *(replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report)*:

**Description, Pages**

1-41 as originally filed

**Claims, Numbers**

1-42 received on 03.10.2005 with letter of 03.10.2005

**Drawings, Sheets**

1/1 as originally filed

- ☐ a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing
3. ☐ The amendments have resulted in the cancellation of:
- ☐ the description, pages
  - ☐ the claims, Nos.
  - ☐ the drawings, sheets/figs
  - ☐ the sequence listing (*specify*):
  - ☐ any table(s) related to sequence listing (*specify*):
4. ☐ This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).
- ☐ the description, pages
  - ☐ the claims, Nos.
  - ☐ the drawings, sheets/figs
  - ☐ the sequence listing (*specify*):
  - ☐ any table(s) related to sequence listing (*specify*):

\* If item 4 applies, some or all of these sheets may be marked "superseded."

**INTERNATIONAL PRELIMINARY REPORT  
ON PATENTABILITY**

International application No.  
PCT/DK2004/000487

---

**Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

---

**1. Statement**

Novelty (N)	Yes: Claims	1-42
	No: Claims	
Inventive step (IS)	Yes: Claims	16-19, 29-42
	No: Claims	1-15, 20-28
Industrial applicability (IA)	Yes: Claims	1-42
	No: Claims	

**2. Citations and explanations (Rule 70.7):**

**see separate sheet**

**Re Item V**

**Reasoned statement with regard to novelty, inventive step or industrial applicability;  
citations and explanations supporting such statement**

1). Reference is made to the following documents:

D4 : US-A-2754214

D7 : US-A-2444266

The document D7 was not cited in the international search report. A copy of the document is appended hereto.

2). Art. 33(2) PCT (Novelty) :

The subject-matter of claims appears to be novel since no document of the available prior art discloses the same method for providing fibre-containing pectin products as defined in claim 1.

3). Art. 33(3) PCT (Inventive step) :

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 1-15 and 20-28 appears not involve an inventive step in the sense of Article 33(3) PCT.

The document D4 is regarded as being the closest prior art to the subject-matter of claim 1, and discloses a process for providing a fibre-containing pectin product from a plant material wherein the de-esterification treatment step is performed at a pH-value from 5.80 to 7. Before the alkaline treatment, the peels are placed in a tank containing a salt such as sodium chloride at a concentration of about 0.25 mol per litre.

The subject-matter of claim 1 therefore differs from this known process in that the de-esterification step is an alkaline treatment at a pH value above 7.0.

The problem to be solved by the present invention may therefore be regarded as to provide a new and simple method of treating pectin-containing plants under de-esterifying conditions, thereby achieving fibre-containing products as well as isolated products having improved gel-forming and/or viscous giving properties.

The solution proposed in claim 1 of the present application cannot be considered as involving an inventive step (Article 33(3) PCT) for the following reasons.

D7 relates to pectic materials and to a process for preparing partially demethoxylated pectins (pectinic acids) of high molecular weight. The process comprises an aqueous slurry of citrus peel or apple pomace at a temperature within the range of 0° to 60°C and sufficient sodium hydroxide to bring the reaction mixture to a pH of 6 to 10 and preferably from 8 to 10. Under these conditions, the pectin-esterase demethoxylates the pectin in situ. The resulting products are very fibrous in nature and their solutions exhibit very high viscosities.

The skilled person, confronted with problem, would easily combine the teaching of D4 and D7 and come to solution as defined in claim 1.

4). Dependent claims 2-15 and 20-28 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of inventive step. The temperature, the salt concentration, the de-esterification treatment time, the choice and the amount of the alkaline reagent are for the skilled person trivial and obvious technical features in view of D4 and D7.

5). The combination of the features of dependent claims 16-19 and 29-42 together with the features of the main claim 1 is neither known from, nor rendered obvious by, the available prior art.

The reasons are as follows : the skilled person finds no suggestion in the available prior art that by combining the enzymatic de-esterification treatment at a pH above 7 with a further amidation treatment, the fibre-containing product can form in aqueous solutions comprising calcium ions, stable gels with surprisingly high gel strength.

The subject-matter of the claims 16-19 and 29-42 is novel and involves an inventive step.

Application No: PCT/DK2004/000487

Publication No: WO 05/003178

5 AMENDED CLAIMS - OCTOBER 2005

1. A method for providing a fibre-containing pectin product from a plant material, said method comprising the steps of:

- 10 (i) providing an *in situ* reaction system by swelling the plant material in an aqueous solution, where said aqueous solution comprising at least one salt,
- (ii) subjecting pectin present in the swollen plant material from step (i) to a de-esterification treatment, and
- 15 (iii) separating the de-esterified fibre-containing pectin product,

wherein the de-esterification treatment in step (ii) is an alkaline treatment having a pH-value above 7.0.

20

2. The method according to claim 1, wherein the aqueous solution does not contain an organic solvent.

3. The method according to any one of claims 1 or 2, wherein the plant material is swelled

25 in the aqueous solution for 1 to 120 minutes.

4. The method according to any one of claims 1-3, wherein the plant material is swelled in the aqueous solution at a temperature in the range of 0-120°C.

30 5. The method according to any one of claims 1-4, wherein the plant material is swelled in the aqueous solution providing a dry matter content of the plant material in a range from 1-50%.

6. The method according to any one of claims 1-5, wherein the amount of the at least one

35 salt correspond to a salt concentration from 1 mmol to 30 mmol per gram of plant material dry matter, such as from 5 mmol to 15 mmol.

7. The method according to any one of claims 1-6, wherein the aqueous solution is an inorganic aqueous solution.

35273 PC 01

43

8. The method according to any one of claims 1-7, wherein the at least one salt is a water-soluble and neutral salt.
- 5 9. The method according to claim 8, wherein the water-soluble and/or neutral salt is selected from the group consisting of sodium salts, potassium salts, calcium salts, chloride salts, nitrate salts and mixtures thereof.
- 10 10. The method according to any one of claims 1-9, wherein the de-esterification treatment is continued for 1 to 120 minutes.
11. The method according to any one of claims 1-10, wherein the de-esterification treatment is performed at a temperature in the range of 0-120°C.
- 15 12. The method according to any one of claims 1-11, wherein the de-esterification treatment is performed with a dry matter content of the plant material in a range from 1-50%.
13. The method according to claim 1, wherein alkaline condition provided in step (ii) is  
20 provided by the addition of a alkaline reagent giving a pH above 8, e.g. above 9, such as above 10, e.g. above 11, such as above 12, e.g. above 13, such as 14. (in the range from 7-14, such as in the range of 8-13, e.g. in the range of 9-13, such as in the range of 10-13, e.g. in the range of 11-13, such as in the range of 11.5-12.5)
- 25 14. The method according to claim 13, wherein the alkaline reagent is at least one of ammonia or other low molecular amines, diamines or amino acids, hydroxides of sodium, potassium and calcium or hydroxides of organic bases, such as tetramethylammonium-hydroxide.
- 30 15. The method according to claim 14, wherein the amount of alkaline reagent is from 20 mmol to 80 mmol of basic reagent per gram of pectin-containing plant dry matter.
16. The method according to any one of claims 1-15, wherein the plant material is further subjected to an amidation treatment.
- 35 17. The method according to claim 16, wherein the amidation is provided by addition of an amidation reagent selected from the group consisting of ammonia or other low molecular amines, diamines or amino acids.

35273 PC 01

44

18. The method according to any one of claims 16 or 17, wherein the swollen plant material obtained in step (i) is treated with the amidation reagent for 1 to 120 minutes.
19. The method according to any one of claims 16-18, wherein the swollen plant material  
5 obtained in step (i) is treated with the amidation reagent at a temperature in the range of -15 to 75°C.
20. The method according to any one of claims 1-19, wherein the separated and de-esterified fibre-containing product obtained in step (iii) is subjected to at least one washing  
10 step and/or at least one pressing step to obtain the fibre-containing pectin product.
21. The method according to claim 20 wherein the washed and/or dried fibre-containing pectin product is dried to a dry matter content of at least 90% by weight, and optionally comminuted.
- 15 22. The method according to any one of claims 1 or 21, wherein the fibre-containing pectin product has a degree of esterification from 0-80, such as from 0-50, e.g. from 2-50, such as from 2-45, e.g. from 2-40, such as from 5-50, e.g. from 10-50, such as from 10-40, e.g. from 15-35.
- 20 23. The method according to any one of claims 1-22, wherein the fibre-containing pectin product has a degree of amidation of not more than 95% e.g. not more than 75%, such as not more than 60%, not more than 50%, such as not more than 40%, e.g. not more than 30%, such as not more than 25%, e.g. not more than 20%.
- 25 24. The method according to any one of claims 1-23, wherein the fibre-containing pectin product obtained in step (iii) has a dry matter content of at least 1% (w/w) of the dry matter, such as at least 5% (w/w) of the dry matter, e.g. at least 10% (w/w) of the dry matter, such as at least 15% (w/w) of the dry matter, e.g. at least 25% (w/w) of the dry  
30 matter, such as at least 50% (w/w) of the dry matter, e.g. at least 75% (w/w) of the dry matter, such as at least 85% (w/w) of the dry matter, e.g. at least 95% (w/w) of the dry matter..
25. The method according to any one of claims 1-24, wherein the plant material is  
35 obtained from a native vegetable material in a fresh or dried state.
26. The method according to any one of claims 1-25, wherein the plant material is selected from the group consisting of potato pulp, sugar beet pulp, pomace residues from apples, peels or pulp from citrus fruits, such as lemon, orange, mandarin, lime, and grapefruit.

35273 PC 01

45

27. A fibre-containing pectin product obtainable by a method according to any one of claims 1-26.
- 5 28. The product according to claim 27, wherein the fibre content present in the product is at least 1% (w/w) of the dry matter, such as at least 5% (w/w) of the dry matter, e.g. at least 10% (w/w) of the dry matter, such as at least 15% (w/w) of the dry matter, e.g. at least 25% (w/w) of the dry matter, such as at least 50% (w/w) of the dry matter, e.g. at least 75% (w/w) of the dry matter, such as at least 85% (w/w) of the dry matter, e.g. at  
10 least 95% (w/w) of the dry matter.
29. A method for providing a pectin product, said method comprising the steps of:
- 15 (i) providing a fibre-containing pectin product according to any one of claims 27 or 28,
- (ii) adding an extraction medium to the fibre-containing pectin product providing an extraction suspension,
- 20 (iii) adjusting the pH of the extraction suspension to a pH in the range of 1-12,
- (iv) adjusting the temperature of the extraction suspension to a temperature in the range of 0-120°C, and
- 25 (v) isolating the pectin product from the aqueous phase of the extracting medium.
30. The method according to claim 29, wherein the extraction medium has a pH in the range of 1-6, such as in the range of 2-6, e.g. in the range of 2-5, such as in the range of 3-5, e.g. in the range of 4-5.
- 30 31. The method according to any one of claims 29 or 30, wherein the temperature is in the range of 40-100°C, such as in the range of 60-80°C.
32. The method according to any one of claims 29-31, wherein the pectin product is  
35 Isolated by any known method such as precipitation, extraction, centrifugation, filtration, chromatography, drying.
33. A pectin product obtainable by a method according to any one of claims 29-32.

35273 PC 01

46

34. The product according to claim 33, wherein said product fulfils at least one of following requirements:

- 5 (i) the product has a viscosity of at least 40 cp when mixed in a concentration of at the most 1% (w/w) of pectin in a solution and measured by using a citric/citrate buffer and in a Haake Rheostress 1 viscosimeter as defined in method A, or
- 10 (ii) the product has a viscosity which is at least 2 times higher than the viscosity of conventional manufactured pectin products when mixed in a concentration of at the most 1% (w/w) of pectin in a solution and measured by using a citric/citrate buffer and in a Haake Rheostress 1 viscosimeter as defined in method A.

35. A product comprising pectin that fulfils at least one of following requirements:

- 15 (i) the product has a viscosity of at least 40 cp when mixed in a concentration of at the most 1% (w/w) of pectin in a solution and measured by using a citric/citrate buffer and in a Haake Rheostress 1 viscosimeter as defined in method A, or
- 20 (ii) the product has a viscosity which is at least 2 times higher than the viscosity of conventional manufactured pectin products when mixed in a concentration of at the most 1% (w/w) of pectin in a solution and measured by using a citric/citrate buffer and in a Haake Rheostress 1 viscosimeter as defined in method A.

36. The product according to claim 35, wherein the product has a viscosity of at least 30  
25 cp when mixed in a concentration of at the most 1% (w/w) of pectin in a solution, such as at least 10 cp, e.g. at least 15 cp, such as at least 20 cp, e.g. at least 25 cp, such as at least 35 cp, e.g. at least 40 cp, such as at least 45 cp, e.g. at least 50 cp, such as at least 75 cp, e.g. at least 100 cp, such as at least 150 cp, e.g. at least 200 cp.

30 37. The product according to any one of claims 35 or 36 wherein the product has a viscosity which is at least 2.5 times higher than conventional used pectin products, such as at least 3 times higher, e.g. at least 3.5 times higher, such as at least 4 times higher, e.g. at least 5 times higher.

35 38. The product according to any one of claims 35-37, wherein the pectin has a degree of esterification from 0-80, such as from 0-50, e.g. from 2-50, such as from 2-45, e.g. from 2-40, such as from 5-50, e.g. from 10-50 and/or a degree of amidation of not more than 95% e.g. not more than 75%, such as not more than 60%, not more than 50%, such as

35273 PC 01

47

not more than 40%, e.g. not more than 30%, such as not more than 25%, e.g. not more than 20%.

39. Use of a product according to any one of claims 27-28, 33-34 or 35-38 for the  
5 encapsulation of, e.g., easily volatile lipid and/or water-soluble aromatic and colouring agents or by encapsulating micronutrients, flavouring agents, vitamins, etc.

40. Use of a product according to any one of claims 27-28, 33-34 or 35-38 in the  
production of solid and liquid pharmaceutical compositions, including, e.g., tablets,  
10 suspensions, emulsions, etc. and as components in cosmetic products, such as perfumes, creams, and lotions, etc.

41. Use of a product according to any one of claims 27-28, 33-34 or 35-38 as a  
viscosifying agent and/or an emulsifying agent

15

42. Use of a product according to any one of claims 27-28, 33-34 or 35-38 for fat  
replacement or for the replacement of tobacco.
